

PICOT. 1657. 16
AN

Almanack for the yeare of our
LORD GOD, 1657.

being the first after the Bissextile, or the Leap.
year: And since the Creation, 5607.

Containing very many profitable
Prædices, usefull Tables; As of six in the hundred, of Retail-
ing by the hundred, measuring of timber, stone, board, glass,
&c. by the Foot, Also measuring of Cloth, Wainscot, paving
and painting by the yard. The making and use of a sin-
gular new devised Ruler, and an excellent yard, for the
same purpose. As also the making and use of a very perfect
Water- Levell of small charge, newly invented by this Au-
thor: With many other things usefull, pleasant and pro-
fitable.

Calculated for the Meridian and Latitude of the
A. Gent and quondam flourishing Towne of Ludlow in
Shropshire. By Francis Picot, inhabiting in the
Parish of Clebury Mortimer, in the said
County, &c.

*Calum immensum, & pulcherrima regia divum,
Quam pura es: quam perspicua & mirabilis, & quot
sæpe sideribus variis ornata recubas,
Regis cœlestium plenissima deliciarum.*

Printed for the Company of Stationers 1657

The Dominion of the Moon in Mans body, passing under the 12 Zodiacall Constellations.

The Circle of the Sun. 14

The Epact. 25

The Roman Indiction. 10

Easter day. March 29

Ascension day. May 7

Whitsunday. May 27

Advent Sunday. Nov. 29

Sundays after Trinity. 26

Of the Priming of the Moon for ablation.

The Moon is said to be primed when she is three daies and 18 hours old. And it is to be observed, that ancients have delivered for a truth, that such young Carrell as are weaned between the time of the change, and the next full moon, are much more subject to sickness, and will be subject to various and violent fits in the head.

January hath xxix dayes.

New Moon 4 day, about 1 afternoon.
 First quarter 12 day, past 5 after noon.
 Full Moon 19 day, near 16 at night.
 Last quarter 26 day, about 2 aft. noon.

Remarkable
passages in
the Reign of
K. Charles.

1	a	Eberald.	Breast	1	0	36	8	8	17	The King re- turns out of Scotland, and is received with great Pomp and State at Lon- don. The B. of Strassford is condemned and beheaded and the Arch- bishop of Canterbury put into the Tower 1641. Great dissen- sion grows between the king and the Parliament. 1642. The k. leaves the Parliament, and betakes himselfe to the assistance of the Nor- thern coast. Sir John Ho- rham denies him entrance into Hull. The k. sets up his standard at Notting- ham.

Memorable passages

The king is delivered by the Scots, into the hands of the Parliament Commissioners, who bring the king to Holmby. From thence he is taken by the Army, & brought to Roxton. Some difference there is between the Parliament and the Army about this, but the whole Army join together, and bring the king to Hampton Court, and so march through London. But in a while the Army beginning to jar among themselves, the king sent to the Isle of Wight.

Many houses in Tower street blown up, and about an hundred
persons slaine. The Scots consent with the late Kings eldest son,
and crown him King, raising all their power to assist him. Where-
upon Lord Generall Cromwell marcheth with an Army into
Scotland, the Scots upon advantage face them at Dunbar, but af-
ter a little fight, the English had a great victory, 10000 Scots being
taken, and the Lord Generall takes up his quarters at Edinburgh.
They grow strong in the North, but dare not come over the Fife
to fight our Army, and having possession of Sterling, keep off our
Army. But in July some of our Army get over in boats, and over-
throw a strong party. The King and his Army presently fall into
England, and march as far as Worcester without any opposition,
but staying there, our Army overtook them, upon the third of
September, and gave them a very great overthrow (as they did at
Dunbar, that day twelvemonth before) the King himselfe very
narrowly escaping, many English imprisoned, and Lov and Gib-
bons beheaded. Ireland being thus conquered, Scotland subdued,
and England pretty well quieted, the Parliament take the com-
plaints of Merchants and Seamen against the Dutch, and many
more publick injuries offered by them, into consideration; and
make an order, that the Dutch shall bring no commodities into
our parts, but such as are of the growth of their own Countrey.
This made the Dutch, makes them strengthen their Navies, thin-
king to over-power us at Sea. Yet fearing the worst, they send
their Commissioners hither to treat for an agreement. But in the
meane time, thinking they had got a great advantage of us, they
set upon a great part of our Navy by Dover, who valiantly defen-
ded themselves beyond expectation. Thus the Treatie is broke off,
and the wars grows on, both at home and abroad; our Fleets for
the most part worshipping theirs. But in the Straights they get the
better of our Merchants. Glasgow in Scotland burnt. The old Par-
liament, that had continued now 12 years, is dissolved, and a new
one chosen. A Comet appears from the 8. or 9. to the 30. of De-
cember. Yet for all these changes and alterations, (thanks bee to
God) there is no confusion, but rather a prosperous proceeding. The

A Prognostication.

The Dutch came in a vapouring humour into Dover road, and made some shot into the Town, but they have been handsomely paid for their paines twice since; their chiefe Admirall V A TRUMP being slaine in the latter. And now they have sent more Commissioners in reference to another Treaty.

But now seeing limitation of Paper doth stop the current of pen, I must herein conclude untill hereafter. Desiring the Lord to furnish our Superiours with the spirit of courage, unity, peace and concord, and all inferiours with fidelity, loyalty and obedience to Gods glory and our comfort. So be it.

Pace quid utilius? Misericordia durans armis?
Pace viginti urbes, Rumpuntur mœnia bello.
Pace augentur opes, Minuantur tempore belli.

AN APPENDIX. Certain other necessary observations.

THE first day of January, begins the Circle of the Sun, with the prime or golden Number, but the Epoch not untill the first of March. As antiquity reports, 540 years since, in March, was most fearfull lightnings and in December following, most dangerous thunder and haile, so that the Moon (most prodigiously) seemed to be turned into blood.

There will be two Eclipses visible in our Horizon, and those onely of the Moon. The first will happen on the 15. day of June, being almost totally obscured about 8. of the clock at night, her duration 3. hours. The 2. Eclipse of the Moon will be on the 10. day of December, about 6. of the clock at night, and being small, will endure about 2. hours.

The Eclipse of the Sun, is nothing else but the body of the Moon, running betwixt our sight and the Sun, and hides some part of the Sun from our sight, at the very time of the New Moon, and not else.

The Moon Eclipse is the shadow of the body of the earth, falling between us and the Moon, and is alwaies Eclipsed at the full, but not at every full.

Hereafter followeth an excellent ready Table for such as
buy or sell any such commodities, as are bought
of sold at 112 pounds in the hundred.

Pound price.	Hundreds price.	Pound price.	Hundreds price.	Pound price.	Hundreds price.

7 0 0	0 3 4	0 14 0	0 10 8	1 9 0	0 8 0

The excellent use of this precedent Table followeth.

Observe that there be three larger Columns in this Table, distinguished into five other lesser Columns; the Column under pound, doth manifest the price of the pound weight, according to the rate of the Hundred; As for Example, If I pay 21. 41. 42. for the Hundred of Hops, Cheese, or any other commodity, the pound weight whereof cometh to four pence, three farthings, the pound and so the rest in like manner.

A brief Rule whereby you may know how much your dayly Expence cometh to in the year. Suppose you spend two pence a day, it cometh to two pounds, two halfe pounds, two groats, and two pence in the year. Again, six pence a day, cometh to six pounds, six halfe pounds, six groats, and six pence; which riseth to 91. 21. 62. In the year: the like of any other number of pence.

Note that a day Naturall is 24. hours, and a day Artificiall from Sun rising to Sun setting: an hour containeth 60. minutes, three quarters 45. halfe an hour 30. minutes, and a quarter of an hour 15 minutes.

Instructions for the using of these Table of Interest.

In the Column of the left hand, you have the several sums of money from 1000. to 10. inclusively; the twelve months at the head; L. standing for pounds, D for pence, S for shillings, &c.

As for Example: I would know the Interest of 900l. for six months. I find 900 in the first Row leftward, and the six months at the head, and with the meeting of the Sum with the time of six months, and under the same you have 27. your desire, and so of the rest.

This Rule for Timber measure is short, for want of room to express the Table now, but hereafter God willing. Observe that Timber hath three Dimensions, viz Length, breadth and thickness; therefore multiply the breadth by the thickness, and by the product thus of divide the Cube of 12 (viz 1728) (the inches in a foot of square Timber) the quotient will give the length required for to make a foot of Timber. Suppose a piece whose breadth and thickness is equal six inches square; how many Inches length for a foot? The product of 6 by 6 is 36. Now the quotient of 1728 by 36 is 48, and so many Inches in length make a foot of Timber, being 6. Inches square; and so of the like.

A Table of the Kings and Queens of England.

Their Names	Years of Birth.	Began to Reign.	Reign.	Ended their Kings
Will. Conquer.	1028	1066 Octob. 25	20 11	570 Septemb. 9

K. Charles 1	1600	1625 March 27	25 11	9 January 30

This Table is very usefull in searching out the Antiquity of ancient Evidences, that are dated by the years of some of these Kings Reigns; and, not by the year of our Lord. *Example.* Since the 25 year of King Henry the third, how long it is found thus. Look for the Year in the Table that he began to reign, which is 1216. To which add the 25 years, which make 1241. which subtract from this present year 1557, and the remainder is the time since, viz. 316 your desire; so the like for any other.

A Table of Board and Glasse measure, exactly calculated.

The Use of the foregoing Table.

The proceeding Table is very useful for such as have occasion to measure Board, Glasse, or any flat measure of unequal breadth at any time: It is divided into six large Columns, as you may perceive by the long lines straight down the Table, each Column downward containing six Inches; with small parts of Inches, beginning at 1.4. of an Inch, and so proceeding to 5. Inches 9. 4. as the Figures (signifying Inches) direct you: Moreover the first little Column next the left hand, under the Title (Parts of Inches) contains only the parts of Inches answering to each Inch throughout the Table: Now for the use hereof; having the breadth of what you are to measure given, the length that shall make a square foot, is here represented in the Table unto your view by inspection only: Example; Suppose I have a piece of Glasse, whose content I desire to know; the breadth whereof is 9 Inches, and 3. 4. now I desire to know how much in length (at the 6 each) doth make a foot I use: First I seek 9 Inches amongst the Figures, which I find in the middle of the second Column, next I seek in the first little Column on the left hand for 3. 4. parts of an inch amongst the parts which answer to 9 Foot, which having found, I guide mine eye rightwards from thence, untill I come under 9 in which Angular long square, I find 1 Foot 2 Inches and 3. 4. of an Inch, and so much in length of my Glasse, which is 9 Inches 3. 4. broad, doth make one foot square, whereof I conclude that a piece of Glasse 9 Inches 3. 4. broad, and 1 Foot 2 Inches and 3. 4. long, doth make one square foot; then I look how oft 1 Foot 2 Inches and 3. 4. is contained in the length of my Glasse, and so many square foot I conclude to be in my whole piece; as I suppose my Glasse to be 6 Foot, 0 Inch, 4. long, I take 1 Foot 2 Inches 3. 4. (which is the length of a Foot at that breadth) and measure the length of my Glasse therewith, noting how oft it contains that ten th, which I find to be 5 times, and so many Foot I have in my Glasse: Again, suppose I have a Board or Pavement, 15 Inches broad, I would know how much of my Rule must be laid out to make a square foot: First I seek 15 Inches as before amongst the Figures, and in the first little Column next the left hand I find the Cypher 0, from which I direct mine eye forwards, untill I come under 15 under which I find nine Inches and 5. 8. parts of an Inch, and so much must I measure out with my Rule to make a foot square; then I look how oft 9 Inches and 5. 8. parts of an Inch is found in the length of my Board or Pavement, and so many Foot I may safely conclude to be therein: And thus you may doe of any breadth what ever. For if it happen that your breadth exceed the Table, then you must divide the breadth into parts, and so proceed as before is taught to find the Length.

The Use of the 6 Column of the Kalendar : for finding the Rising and Setting of the Moon : If the increase, add the time of her shining there found, to the time of Sun setting, and that is the time of her rising : but if she be above 15 days old, subtract her shining from Sun rising, the Remainder will be her Rising : For her Setting, at her decrease, add her shining to the time of Sun setting, given her setting : but if the decrease, subtract her shining from Sun setting, and the Remainder is her setting : but if the time of Sun setting be less then her shining, then add twelve hours thereto, and the time of her setting will appear.

The Fairs in England and Wales expressed according to the order of the Letters, for the speedy finding of each Fair, carefully collected by F. P.

The Letter T. hath

six Towns for fairs.

The

PIGOT, 1657.

The whole number of Towns wherein the Fairs herein expressed are kept, is 702. then needs must the Fairs be a great number, for most of the Towns have three or four Fairs.

A Geographical Description of Highways from Town to Town, and so from those Towns to the Honourable City of London, very exactly expressed.

Profitable Directions.

Generally Plant and Graffe, in the begin-
ning of the *Spring*, the Moon increasing,
and in *Taurus*, *Virgo*, *Capricorne* or *Pisces*, the
Wind not being in the North or East; because
those winds are nipping and fretting.

Remove Trees in *September*, *October* or *No-*
vember the Moone in *Aries*, *Libra*, *Scorpio*, and
be

PIGOT, 1657.

be sure to set that side of the Tree to the South againe, that was at or toward the South before, sow seeds of round Roots, as Onions, Turnips, Pompions and the like, three or four dayes before the Full. Geld Cattell, the Moon in *Aries*, *Sagittarius* or *Capricorn* after the Full. Shear Sheep, cut hair and sow all manner of seeds and grain the Moon increasing.

Dung Lands to destroy Weeds in the last quarter, gather the flowers and seeds you intend to keep all the year, at the Full, and the like for Herbes, dry them first in the shadow, then in the Sun.

Gather fruits in a dry afternoon, put every sort of your fruit by it selfe: let them be gathered in the last quarter of the Moon: put not the bruised nor the fallings among the rest.

Fall Timber to build from Midsummer till Twelfe-tide, the Moon decreasing.

Good Lord preserve our English Common wealth,
 And give us peace and unity ever the same,
 And give us grace to walk for our souls health,
 In glorifying thy most holy name.

If any one desire to have the Rular, Yard, or Ware
 level, in the first page mentioned, upon intelligence ther
 of given unto this Author, he may (by him) be furn
 ed at an easie rate.

If any Heroick Spirit, or general Gentleman, be d
 frou to brant, for his understanding, and to have the best ad
 ornments of *Mathematicall* knowledge, he may be
 structed (if he please) by this Author, who is well ex
 perienced in these practices, following.

Item, the making of Face Dyals, both in Me
 tall and durable Colours in direct formes.

Item, the making and use of all sorts of portable
 Instrumentall Dyals, *viz.* Quadrants, Quadrats, Ky
 dyals, *&c.* and also the making and use of the
 Baculum Magneticum, or Staffe dyall devised some 100 yea
 past, by this Author, of excellent use.

Item, The use of Globes, Sphaeres in plano: the Ma
 thematical Jewell, Mr. Gunters Sector, &c. and man
 other such Mathematical Instruments, Geometry,
 Land measuring, and the plan Table, The gnomon, C
 cumferetor, The Opticks Gedeonical Staffe, &c.

The use of Sines, Tangents and Secants, and the Art of Diall
 thereby performed with great certainty, and facility. *Arithmetica*
 with its parts, which is the ground of all Sciences. *Non nobis
 solum: Deo soli laus omnis & gloria tribuatur.* PIGOT.

Two Pieces of excellent Use, *Adm in Ecclia*, or Natures Part
 one; the History of our English Plants, and the Physical use
 them, fitted for English bodies, by M. C. The expert Doct
 Dispensatory, the whole & 1 of peevish Physick restored, &
 compounding all medicines fit for Apothecaries and Chyrurgions,
 may be sold by N. Bough at the Angel in Cornhill.
